

# eCTAS Certification Conformance Testing Overview

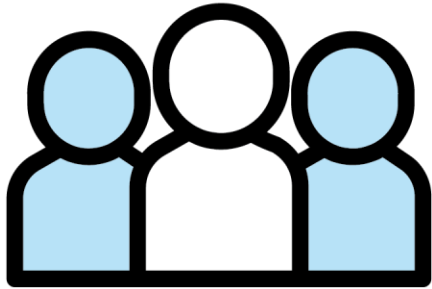

Implementation & Support

**Ontario  
Health**

**Welcome**

# Audience and Logistics

- Facility Project Manager(s)
- Facility Technical Lead(s)
- Facility Clinical Lead(s)
- eCTAS Coordinator(s)

- This session is being transcribed and recorded
- The ATC Information Site includes supporting resources:
  - You can download a copy of today's presentation (PDF)
  - A recording of today's session will be available within 5 business days

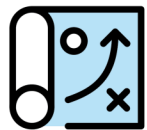

# Key Symbols

This presentation includes the following common symbols that are used to flag important information that you should note:

## **Objective**

What are we trying to do?

## **Plan**

How are we going to do what we need to do?

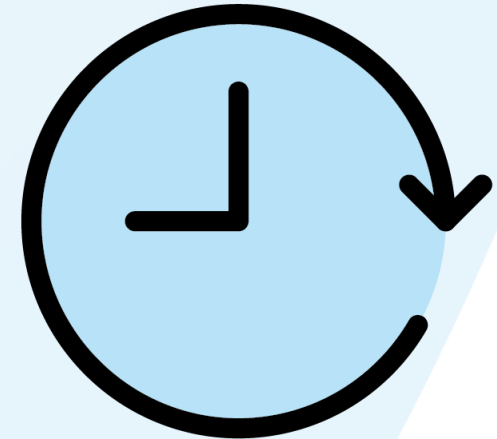

## **Key Announcement**

Important information about the project.

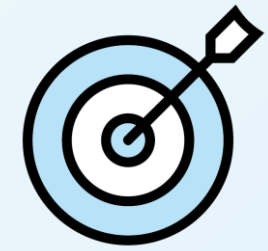

# Agenda

TOPIC	TIME
eCTAS Testing Requirements	2 mins
Conformance Testing Readiness	5 mins
Conformance Testing Overview	10 mins
Conformance Test Scripts	5 mins
Test Result Report Tool	20 mins
Supporting Resources	3 mins
Next Steps	5 mins

# eCTAS Testing Requirements

# Testing Requirements

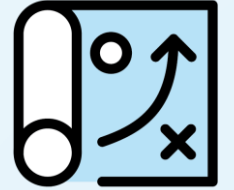

## Phase 1: Conformance Testing

- Ensure that information can be retrieved from the built-in CTAS Brain
- Ensure that CTAS scores can be calculated by the built-in CTAS Brain
- Ensure that all required and optional data elements can be submitted using the Web Service POST method
- Two cycles (rounds) of testing

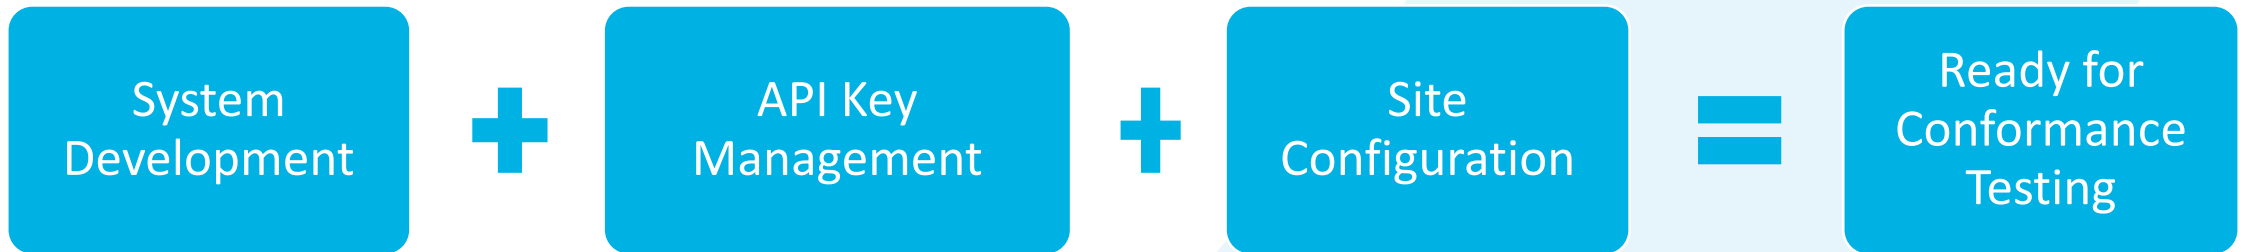

# Conformance Testing Readiness

# Testing Readiness

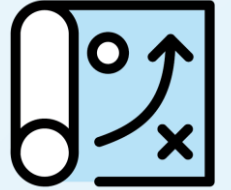

## Preparing for Conformance Testing

The below items are project activities that must occur ahead of the conformance testing phase of the eCTAS implementation project

# System Development

Develop System to meet eCTAS Standards and Guidelines

Reference Documentation Available:

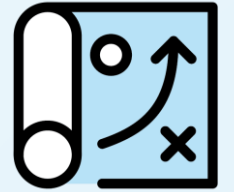

- Technical Development & Design Considerations Overview
- eCTAS Developer Portal
- eCTAS User Interface Requirements
- ATC Information Site
  - eCTAS Web Service Data Element Requirements
  - eCTAS Web Service Reference Codes

## Key Activities

Confirm System Development is complete by March 27, 2026

# API Key Management

Provisioning of an API Key to a facility technical resource is required for connecting, testing and submitting triage records to Ontario Health

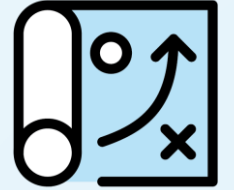

- The assigned technical resource will be invited to the eCTAS Developer Portal to obtain the API Key for each environment: Conformance and Production
- Conformance: eCTAS Developer Portal
  - Assign API Key ahead of testing
- Production: eCTAS Developer Portal
  - Assign API Key ahead of production connectivity testing

## Key Activities

Submit API Key Management Form

# Site Configuration

Each hospital site using the eCTAS Web Service requires 3 values to be configured

## API Subscription Key

- A unique key assigned to your facility and passed in with each Web Service API request

## CTAS Version

- The version of the CTAS Guidelines in use at the site. For example: 2024v1.0

## Site Code

- A 4-digit numeric code that uniquely identifies the hospital site submitting data

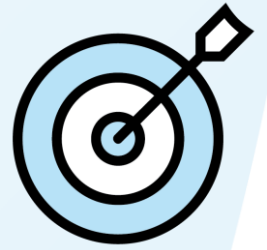

## Key Activities

Ensure each Site(s) settings have been configured prior to any testing

# Conformance Testing Overview

# Conformance Testing Overview

## Purpose

- Conformance Testing is a two-staged process scheduled over a four (4) week period to ensure that the facility system meets the eCTAS technical requirements
- Each cycle of testing is two weeks in length

Complete: Conformance Testing Cycle 1

Complete: Conformance Testing Cycle 2

### Important

All test data should be sent from the facility Conformance environment

# Conformance Testing Overview

When a test script is not successful (FAIL), there are a few different methods that can be applied to address and resolve the error depending on the type of error

Error Type	Required Action(s)
Data entry	Fix the error and re-test the specific script
Interface or system-related	Fix the root cause of the error and restart testing from the first script (e.g., source system has not been developed to adhere to eCTAS data element business rules)

## Important

If you encounter an interface or system related issue during conformance testing, you must fix the root cause of the error and restart from the first test script

# Conformance Test Scripts

# Conformance Test Package

- Conformance testing is required to confirm the structural integrity of your developed solution in meeting the eCTAS standards, guidelines and business & logic rules
- The 'Test Script Package' is an Excel document containing multiple sheets that outline the eleven (11) conformance test scripts and instructions
- The test scripts are designed to provide a detailed description of how to complete the test including what test data should be entered into your facility test system
- The provided test scripts are specific to the facility future state integration level

# Conformance Testing Instructions

- In the Instructions tab of the test package:
  - Read the eCTAS Conformance Testing Instructions
- Proceed to Script 1 tab and complete test scripts 1 - 11
- Complete test scripts 1-11 in facility test environment and validate the testing outcome by accessing the Test Result Report Tool ([eCTAS Conformance Administration Console](#))
- If support/troubleshooting is required, please connect with your OH Specialist via [ATCSupport@ontariohealth.ca](mailto:ATCSupport@ontariohealth.ca)

# Conformance Test Scripts

SCRIPT OBJECTIVE: To successfully triage an Adult patient, submitting a record with the new vital ranges (temp, blood pressure and blood glucose) and complaint-specific modifier for fever				
Script #	eCTAS Workflow	Instructions	Test Data	Validation Guidance
2.1	Register Patient	Create adult patient in HIS by entering Test Data in Column D	First name: testtwo Last name: testtwo Gender: Male HCN: add test HCN value Date of Birth: add value Cohort: Adult Patient Stated and/or Nurse Assessed Complaint: enter complaint	New Patient is added to the Health Information System (HIS)
2.2	Select CEDIS Complaint	Select CEDIS Complaint - 'Oliguria'		List of CEDIS complaints are presented to the user for the selected cohort  Current CTAS Score for selected CEDIS Complaint: 4
2.3	Enter Vital Signs	Enter Vitals Signs from Column D	Temp: 38 Pulse Rate: 59 Blood Pressure: 79/60 SP02 : 89% Pain Scale: 1 Pain Location: Peripheral Pain Chronicity: Chronic GCS: 13 Capillary refill: <2 sec Blood Glucose: 14.1 mmol	Verify CTAS Score: 1

- Follow the instructions as documented for each test script in the order in which they appear (i.e. 1.1 through 1.6)
- Enter the test (Clinical) Data into your HIS and use the Validation Guidance as a reference
- Validate your test results in the Test Result Report Tool once complete to determine PASS/FAIL result

# Test Result Report Tool

# Test Result Report Tool

---

- Overview
- Access
- Navigation

# Overview: Test Result Report Tool

- A feature within the Administration Console for Certification and Web Service integrations
- Available in Conformance only
- Allows Testers to view the status of:
  - Conformance Testing results
  - Clinical Algorithm results (Certification only)
- Requires a role to be added to an existing eCTAS user (Site Integration Tester)
- Enables communication between the facility and Ontario Health

# Process:

**Important:** Before this process can begin, there are dependencies required prior to testing.

# Dependencies:

- Facility Resources required to view the status of their Conformance Testing Results must:
  - ✓ Have a ONE<sup>®</sup> ID account
  - ✓ Be enrolled into eCTAS service
  - ✓ Assigned the role of Site Integration Tester in eCTAS

# Access

---

- eCTAS Environments
- Site Integration Tester Role
- Setting Up Users

# eCTAS Environments

Environments	Application	URL	Purpose
Conformance (TRAINING & TESTING)	Administration Console 	<a href="https://confectas-admin.ccohealth.ca/">https://confectas-admin.ccohealth.ca/</a>	<ul style="list-style-type: none"><li>• Used for <b>Conformance Testing</b> and <b>Clinical Algorithm Validation</b> using <b>fake</b> patient data only</li><li>• Used to train Resources on how to use features using <b>fake</b> patient data only</li><li>• Should <b>never</b> contain real patient data</li></ul>

**Note:** This table and the eCTAS Environment URL can be found in the [Online Help](#)

# Site Integration Tester Role

Features Associated with this User Role:	Resources Who May Require this User Role:	Applicable Integration(s):
<p><b>Administration Console:</b></p> <p><b>Test Result Report</b></p> <ul style="list-style-type: none"><li>• Enables testers at Certification hospitals to view the status and results of their Conformance Testing and Clinical Algorithm Validation</li><li>• The Test Result Report tool is only available in the Conformance environment</li></ul>	<ul style="list-style-type: none"><li>• Resources responsible for testing</li></ul>	<ul style="list-style-type: none"><li>• Certification and Web Service</li></ul>

# Set Up End Users: Existing User

- Contact your facility eCTAS FRA(s) to assign site(s) and role of **Site Integration Tester**

- Assign site(s) and role of **Site Integration Tester**

**Important:** Before this process can begin, user must have a ONE® ID account and be enrolled into eCTAS service.

# Test Result Report Tool

Filter the results by selecting 'Approval Status' type

## SHOW ALL

- Shows all approval status types

## APPROVED

- Test results that have been manually approved by the Ontario Health Specialist

## APPROVED WITH EXEMPTION

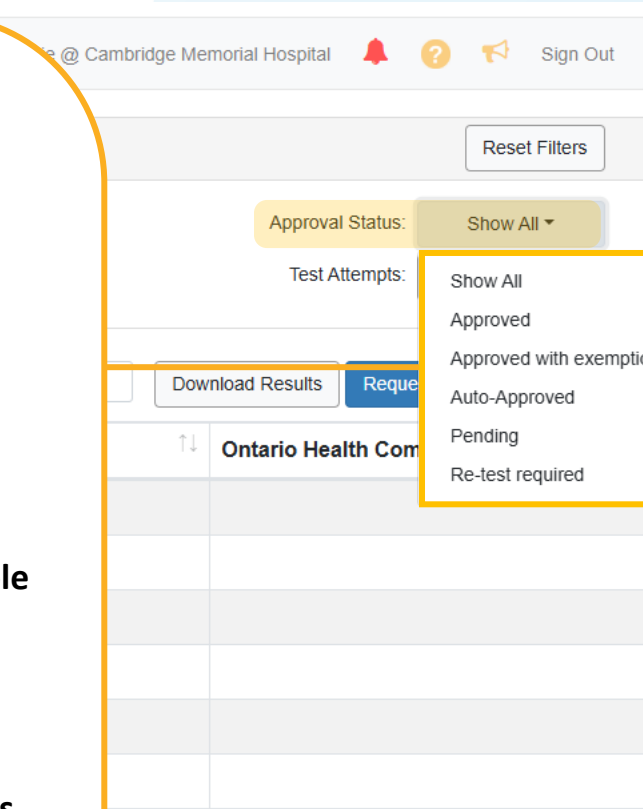

- An exemption that has been approved by Sector Support

## AUTO-APPROVED

- Test results that have been passed by the test result report tool, this auto approval is possible when the test result meets all of the criteria to pass the script and does not require intervention or manual review by the Ontario Health Specialist

## PENDING

- Test results that have been submitted to OH for validation and is awaiting an approval status to be assigned against their submitted results. When the test does not meet the expectations, the approval status is set to '**RE-TEST REQUIRED**' to signify to the testing user that they must re-execute the test until a PASS status is achieved

# Test Result Report Tool

Filter the results by selecting 'Test Attempt' type

The screenshot displays the eCTAS CONFORMANCE Administration Console interface. At the top, it shows the user's location as Cambridge Memorial Hospital. Below the header, there are search filters for Test Number, Test Date Starting/Ending, and Test Result (set to Show All). A table below shows test results with columns for Test Number, Test Result, Test Date, and Approval Status. A dropdown menu for 'Test Attempts' is open, showing options for 'All Test Attempts', 'Latest Test Attempts', and 'All Test Attempts'.

**LATEST TEST ATTEMPTS**

- Shows the most recent results for each test case

**ALL TEST ATTEMPTS**

- Represents a list of all test results from each submission to the tool

### Navigating the Test Result Report Tool feature

The Test Result Report Tool feature enables testers to view the status and results of Conformance Testing and Clinical Algorithm Validation. The tool also enables two-way communication between the facility and Ontario Health. This feature is only available in the Conformance environment. Key elements can be seen below. For example:

- Change view to different site or different feature, if applicable
- Available Reports
- Filter options (see detailed table below)
- Download Results
- Request Ontario Health Review
- Search capability

**Annotations:**

- Select a different site
- Select a different feature
- Available reports including active and completed test results
- Filter options
- Change number of entries displayed
- Test results
- Reset Filters' button
- Request Ontario Health Review' button
- Download Results' button
- Enter 'Site Comment(s)' as needed
