Release Date: Sept 24, 2026

Integrations: **B** - Basic **C** - Complex **WS** - Web Service **CRT** - Certification

Change Type	Details	B	C	WS	CRT
User Interface (UI) Changes	Infection Control Screen - Based on guidance from Public Health Ontario, the COVID-19 screening section has been removed from the Infection Control Screen. (Please note: all other Infection Control Screen prompts will remain, including screening for symptoms of non-specific viral illness) - Usability improvements have been made to the Global travel alert and country-specific travel alerts: - A brief title has been added to make it easier to find a specific alert. - Scrolling has been added to make it easier to read multiple alerts that could previously extend off the bottom of the screen.	✓	✓		
	Nurse Notifications Notification messages for alerts issued by Public Health Ontario can now include multiple links to access further information. Each link will include the name of the associated resource.	✓	✓		
	Indicator for queue refresh in progress The indicator for a manual queue refresh request already in progress has been changed from the do not enter icon  to the waiting icon . This applies to the Pretriaged Patients, Triaged Patients and TOA queues. The indicator appears after the queue refresh button is clicked until the request has completed.	✓	✓		

Change Type	Details	B	C	WS	CRT
	Autocomplete disabled for all text fields An application-wide change has been applied to reduce the likelihood that Chrome or Edge browsers will attempt to auto-complete or suggest values for any fields in eCTAS. This update will not have any visual impact if autofill is already disabled in the browser settings. Note: Disabling address autofill features in Chrome and Edge is still required.	✓	✓		
	Site Role Management - A new list option, Manage Roles, has been added. Facility Role Administrators can use this option to review all users assigned to a particular role and to remove users from a role. - Users can be removed individually or in bulk. For example, all users can be removed from the Triage Nurse role at once during an integration migration activity. - Adding a new role for a user is still completed from the Registered or Not Registered user lists.	✓	✓	✓	✓
	Administration Console A tool that allows Ontario Health administrators to manage nurse notifications has been enhanced. This tool is not visible to hospital users.	N/A	N/A	N/A	N/A
Web Service Enhancements	Frailty Modifier The API GetModifiersByVitalSignAndCEDIS has been updated to accept the <code>vitalSignTypeCode</code> value FRLT. Passing this code with a <code>vitalReading</code> value of 1 will return the Frailty modifier (CTAS 3). Web Service hospitals can use this to automate the selection of the Frailty modifier in eCTAS when combined with an existing frailty assessment tool.			✓	

Change Type	Details	B	C	WS	CRT
Bug fixes	Patient Presentation A workflow issue has been corrected that resulted in notes entered in the First and/or Last Name fields being overwritten with 'Unknown Patient' when the Patient cannot be identified box was checked. Any information entered in these fields is now retained when the Patient cannot be identified box is checked. If no information is present, the default value 'Unknown Patient' is still applied.	✓	✓		
	Patient queue sort order - The ordering of some queue sort options has been corrected: - Overdue reassessments are sorted to the top of the list when sorting by the Reassess column. - Priority patients are sorted to the top of the list when sorting by the ! column. - Patients that left without being seen are sorted to the top of the list when sorting by the Left? Column.	✓	✓		
	Interruptions while entering TOA and Reassessment notes An issue that caused text entry fields such as TOA and Reassessment notes to stop accepting text when the patient queue was refreshed has been corrected. Nurses will no longer need to click back into the fields to resume typing after the queue refreshes.	✓	✓		
	HL7 Message Viewer Performance in HL7 Message Viewer has been improved to reduce timeout errors that can occur when loading message data.		✓		

Change Type	Details	B	C	WS	CRT
	Site Role Management A rare workflow issue that could result in a user role being assigned for the wrong site if the selected site was modified after the role was already chosen has been corrected.	✓	✓	✓	✓
Performance Improvements	System upgrades System component upgrades and instrumentation enhancements have been made to ensure ongoing system stability and security.	✓	✓	✓	✓
